# Academic Program and Course Description Guide

## Introduction:

The educational program is a well-planned set of courses that include procedures and experiences arranged in the form of an academic syllabus. Its main goal is to improve and build graduates' skills so they are ready for the job market. The program is reviewed and evaluated every year through internal or external audit procedures and programs like the External Examiner Program.

The academic program description is a short summary of the main features of the program and its courses. It shows what skills students are working to develop based on the program's goals. This description is very important because it is the main part of getting the program accredited, and it is written by the teaching staff together under the supervision of scientific committees in the scientific departments.

This guide, in its second version, includes a description of the academic program after updating the subjects and paragraphs of the previous guide in light of the updates and developments of the educational system in Iraq, which included the description of the academic program in its traditional form (annual, quarterly), as well as the adoption of the academic program description circulated according to the letter of the Department of Studies T 3/2906 on 3/5/2023 regarding the programs that adopt the Bologna Process as the basis for their work.

## Concepts and terminology:

**Academic Program Description:** The academic program description provides a brief summary of its vision, mission and objectives, including an accurate description of the targeted learning outcomes according to specific learning strategies.

<u>Course Description</u>: Provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the students to achieve, proving whether they have made the most of the available learning opportunities. It is derived from the program description.

<u>Program Vision:</u> An ambitious picture for the future of the academic program to be sophisticated, inspiring, stimulating, realistic and applicable.

<u>Program Mission:</u> Briefly outlines the objectives and activities necessary to achieve them and defines the program's development paths and directions.

<u>Program Objectives:</u> They are statements that describe what the academic program intends to achieve within a specific period of time and are measurable and observable.

<u>Curriculum Structure</u>: All courses / subjects included in the academic program according to the approved learning system (quarterly, annual, Bologna Process) whether it is a requirement (ministry, university, college and scientific department) with the number of credit hours.

<u>Learning Outcomes:</u> A compatible set of knowledge, skills and values acquired by students after the successful completion of the academic program and must determine the learning outcomes of each course in a way that achieves the objectives of the program.

<u>Teaching and learning strategies</u>: They are the strategies used by the faculty members to develop students' teaching and learning, and they are plans that are followed to reach the learning goals. They describe all classroom and extracurricular activities to achieve the learning outcomes of the program.

#### 1. Program Vision

Preparing distinguished medical technical cadres in various fields of health and medical technology, to have a position locally, regionally and internationally in order to provide advanced, high-quality health services to the community. Training students of the Anesthesia Department on preparing, operating and following up on the organization of anesthesia devices, monitoring and treatment devices in the operating and recovery theater and various intensive care units. The medical team participates in clinical interventions for emergency and life—threatening cases in its various workplaces (operating theater, recovery, and intensive care units).

#### 2. Program Mission

Providing an educational and technical research environment that stimulates education and creativity that contributes to preparing highly qualified graduates, achieving effective local and international scientific twinning, and strengthening partnerships with sectors of society and international institutions in relevant fields.

## 3. Program Objectives

Preparing qualified and productive cadres who possess thinking, creativity and learning skills that meet the needs of society and the requirements of the labor market, and contribute to the development and growth of various fields.

Paying attention to scientific research and creating a supportive environment for high-quality applied research at the local, regional and international levels that contribute to addressing the problems faced by labor market sectors.

Developing curricula and study plans to keep pace with rapid developments in the fields of technology and science to meet current and future labor market requirements

Achieving quality standards in educational, research and organizational activities and developing the university's teaching, technical and administrative staff to ensure excellence in performance.

Establishing a culture of continuing education for various sectors of society to meet its requirements, as well as providing services and technical consultations to solve its problems and develop its programs.

Communicating with scientific institutions inside and outside Iraq and exchanging experiences and information according to common goals

#### 4. Program Accreditation

A program based on the Iraqi Ministry of Higher Education and Scientific Research

#### 5. Other external influences

#### 8. Expected learning outcomes of the program

#### Knowledge

1- The mission of the Department of

Anesthesia

Technologies at Al-Kitab University College is to direct and develop all resources to achieve excellence in education, research and patient care, contributing improving human health by preventing diseases throughout Iraq and providing services and medical care in the field of anesthesia in accordance with traditions, ethical and professional values.

The high 2- The mission of the Anesthesia Techniques

> the basic elements in improving patient care

Department includes

in Iraq to include

education, scientific

research, and

continuing education to

Learning Outcomes Statement 1

serve patients in the field of anesthesia by creating a stimulating environment for the acquisition and dissemination of knowledge in the field of anesthesia techniques, and the optimal use of technology.

3- 3- The student must be able to speak and write in an effective, scientific manner in both Arabic and English.

#### Skills

- Graduating specialized cadres to work in anesthesia and intensive care technology magazines in operating theaters as well as in intensive care units and pulmonary resuscitation units by setting up and preparing anesthesia machines and following up on their operating system and care for them, in addition to following up on the patient's condition during anesthesia and under the supervision of the doctor.

Learning Outcomes Statement 2

2 - Preparing cadres with	
modern education and training	
in the field of anesthesia to	
form an important tributary to	
the profession of anesthesia	
and intensive care in hospitals.	
3 - The anesthesia profession	
is considered one of the	
important and sensitive medical	
specialties, and it is important	
to provide a broad base of	
practitioners of this profession	
in the medical field in general,	
so that they can be of	
assistance in working in	
hospitals and under the	
supervision of doctors who	
specialize in anesthesia.	
Learning Outcomes 3	Learning Outcomes Statement 3
Ethics	
The graduate must have	Learning Outcomes Statement 4
scientific and practical	
responsibility	
Able to acquire individual skills	Learning Outcomes Statement 5

## 9. Teaching and Learning Strategies

There are many teaching and learning methods used in the Department of Anesthesia Techniques Engineering, where learning is carried out through theoretical lectures, which are represented by a presentation using (Power Point), group discussions, seminars, and searching for topics and issues via the Internet.

#### 10. Evaluation methods

The department has relied on clear, high-quality assessment methods and tools in order to maintain the good quality of graduates and a high academic reputation. The reputation of graduates is very important because the graduate represents the final product of the teaching process. The most important methods used for evaluation in the department are:

- A Objective tests: The aim of the test is to measure the student's ability to recognize and comprehend scientific facts. This is done using the following:–
- True and false questions.
- Multiple choice questions.
- Interview questions (blank questions).
- Completion questions.
  - B Other tests: They are as follows:
- Seminars.
- Scientific lectures, oral dialogue, theoretical semester and final exams, in addition to the practical exam.
- writing reports.
- Field visits .

11. Faculty								
Faculty Members								
Academic Rank Specialization Special Requirements/Skills (if applicable)  Number of the teaching staff								
	General	Special			Staff	Lecturer		

#### **Professional Development**

#### Mentoring new faculty members

The teaching staff is directed according to the aforementioned regulations and cadres with high potential are prepared

#### Professional development of faculty members

This is done by giving weekly seminars and courses to explain modern teaching methods and the procession of global higher education

#### 12. Acceptance Criterion

The Anesthesia Techniques Department is subject to the work mechanism of the Central Admissions Department at the Ministry of Higher Education and Scientific Research, where graduates of preparatory school – scientific branch are nominated for admission to the department.

#### 13. The most important sources of information about the program

The most important sources of information about the Anesthesia Techniques Department program are the following:

 The curriculum approved by the Ministry of Higher Education and Scientific Research

## 14. Program Development Plan

The focus in the Anesthesia Techniques Department is on continuous improvement and overcoming all difficulties and obstacles that hinder the educational program by developing human resources and developing the personality of employees. The following procedures explain the steps implemented or in the process of implementation in this area:

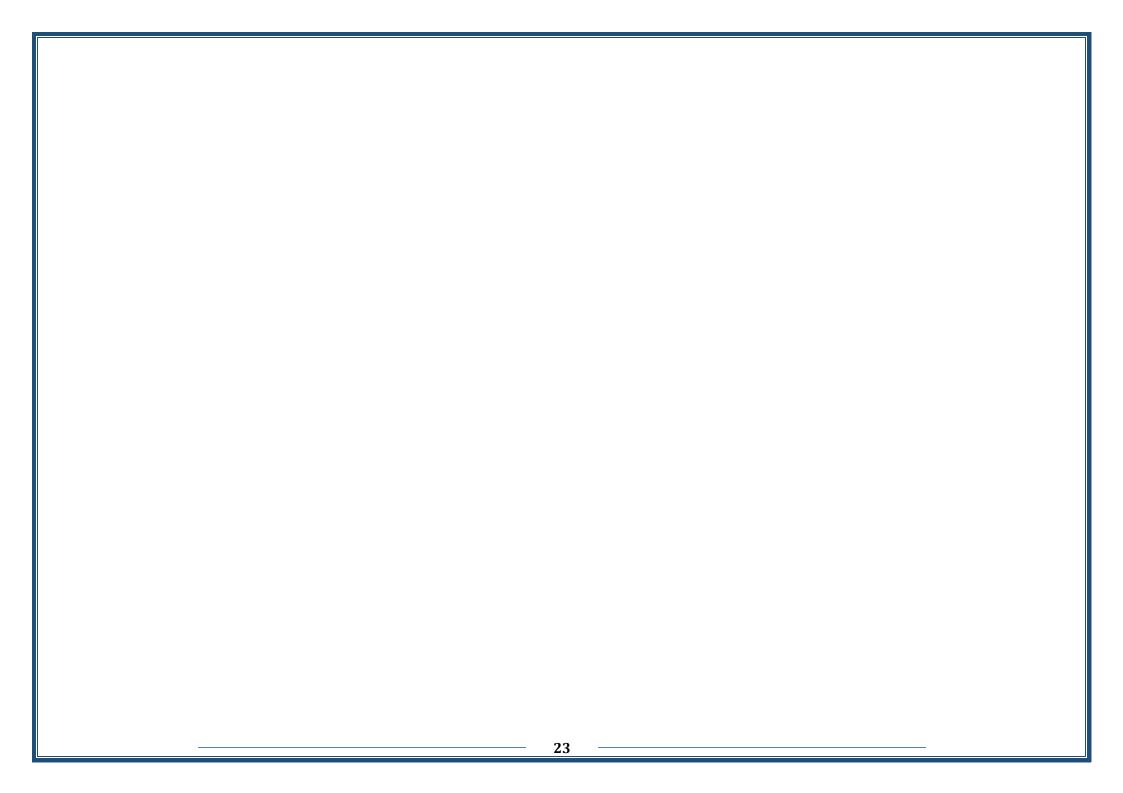

- 1. Continuous improvement and development of faculty members through seminars and workshops
- 2. Increasing national extracurricular activities, such as holding conferences, scientific seminars, and sports activities.
- 3. Encouraging faculty members to obtain the highest academic and administrative ranks.

### 164. Course Objectives

#### **Course Objectives**

...,

At the end of the academic year, the stud will be able to: Identify the physi phenomena of the five chapters that subject addresses and link them to what student needs of the medical phenomethat he observes during his practical I Such as blood flow, a device that reads heart or brain rate, the temperature of human body, and pressures.....

### 165. Teaching and Learning Strategies

#### Strategy

Cooperative Learning: This approach encourages teamwork a knowledge sharing among students. Students can collaborate solve problems • Interactive lessons: This strategy involves usi interactive methods such as discussions and interactive activities attract student attention and encourage them to actively participate in the lesson. • Participatory assessment: This approach involvinvolving the student in assessment processes and mutual exchanging observations and comments, which enhances the understanding of the material and helps them improve the performance.
